

Notice of work

**Rosemont reservoir:
final phase of the work**

**Start: September 2021
End: November 2021**

Information

Nature of the work Starting in September, the city will carry out the final stage of major repairs on Rosemont reservoir. A series of tests will be carried out on the systems associated with commissioning the new pumping station and the largest drinking water reservoir in Montréal.

Impacts While all precautions to avoid disrupting the network's continuous supply are taken, these operations could cause certain visible disruptions at your tap. These situations are usually short-term:

- [Drop in water pressure](#)
- [Water discolouration \(yellowish, reddish, brownish or greyish\)](#). **See back for steps to follow before consuming any.**

Affected boroughs and towns During the tests, residents of Ahuntsic-Cartierville, Anjou, Mercier–Hochelaga-Maisonneuve, Rivière-des-Prairies–Pointe-aux-Trembles, Montréal-Nord, Saint-Léonard, Rosemont–La Petite-Patrie and Montréal-Est may observe the impact mentioned above.

Stay informed

- **For further information on drops in water pressure or water discolouration:**
 - Visit the montreal.ca website.
 - Enter "[drop in water pressure](#)" or "[water discolouration](#)" in the search engine.
- **To receive notifications of upcoming interventions and impact on the water supply system:**
 - Subscribe to the Notices and Alerts system at montreal.ca/en/notices-and-alerts to receive emails or text messages.
 - Select "Water and waterworks".

Is your tap water discoloured? Follow these steps before consuming any:

Turn on your cold water tap.

- At home, we recommend that you use the tap in the bathtub. Otherwise, use the tap for the kitchen sink. If your property has neither a bathtub nor a kitchen sink (because it is a shop, for example), use whatever tap you have available.
- Let the cold water run for a few minutes until it becomes clear.
- Your tap water can then be consumed.

Does your tap have an aerator?

- Before letting the water run, it is recommended to unscrew the nozzle to remove it.

Important

- To avoid staining fabrics and causing any damage, make sure the water is clear before doing your laundry or using any other appliances that use water.

For health questions

- Call 811.

●●●●● Possibility of a drop in water pressure and water discolouration
